

Reusable Dunnage Airbags

Secure it Right

WELCOME TO INTERNATIONAL DUNNAGE

The durability of International Dunnage bags lies in their well designed structure. They are composed of an air tight polyethylene inner layer, with an inflating and deflating valve and strong, elastic polywoven fabric outer.

THE BENEFITS OF USING DUNNAGE AIRBAG

Avoids Accidents

Load shifting is one of the main causes of accidents during transportation. You can minimize load shifting by bracing the loads in place with Dunnage bags. Dunnage bags protect your goods from the first point of packing to their destination thus ensuring customer satisfaction.

Cost Saving

Dunnage bags are inexpensive compared to other load securing techniques. In addition, some dunnage bags are reusable (for non-rail applications in the US). Using Dunnage bag will result in less product damage during transportation. This saves your valuable time and money.

Easy To Use

Dunnage bags can easily be installed in a few minutes using an air hose and inflator tip. No special skills are required, simply follow instructions printed on the bag. The compressed air does most of the work with little physical effort from the packer. You can Deflate the bag by simply unscrewing the valve. There is no need to puncture. This saves time and space for your customers.
